Greetings, Insiders! My name is Jayantika Sarwal, and I'm a Program Manager on the Word team. I'm thrilled to share with you that a feature you love in Word for Windows and Word for Mac has made its way to Word on the web! You can now bookmark locations in your document and quickly access them later. Bookmark locations in your document

A bookmark in Word works like a bookmark you might place in a book. It marks a place that you want to save and refer to again later. You can enter as many bookmarks as you need, but make sure to give each one a unique name so they're easy to identify. How it works To insert a bookmark, select any word or text string, picture, or item in your document you want to be able to refer to later, and then select **Insert > Link > Bookmarks > New Bookmark**. To show bookmark annotations in your document, select **Links > Bookmarks**, and then select the **Show on document** checkbox. To delete a bookmark, after choosing to show bookmark annotations in your document, simply click the bookmark and click **Remove** button that appears. You can also right-click the bookmark and select **Remove Bookmark** on the shortcut menu. **Tips and tricks** Bookmark names: Need to begin with a letter Can include both numbers and letters Cannot include spaces If you need to separate words when naming your bookmark, you can use an underscore (**_**). For example, "First_heading." You can view and navigate through all the bookmarks in your document using the navigation pane. **Availability** The bookmarks feature is available in Word for the web to 10% of the First Release audience. We'll be rolling it out to all users in the coming days and weeks. Don't have it yet? It's probably us, not you. Features are released over some time to ensure things are working smoothly. We highlight features that you may not have because they're slowly releasing to larger numbers of Insiders. Sometimes, we remove elements to further improve them based on your feedback. Though this is rare, we also reserve the option to pull a feature entirely out of the product, even if you, as an Insider, have had the opportunity to try it. **Feedback** We want to hear from you! Please submit your comments and feedback by selecting **Help > Feedback**. Learn more about what other information you should include in your feedback to ensure it's actionable and reaches the right people. We're excited to hear from you! Sign up for the Office Insider newsletter, and you'll get the latest information about Insider features in your inbox once a month. Bookmarks identify in a Microsoft Word document the locations or fragments that you name and identify for future reference. For example, you might use a bookmark to identify text that you want to revise later. Instead of scrolling through the document to locate the text, you can go to it by using the Bookmark dialog box. With Aspose.Words, you can use bookmarks in reports or documents to insert some data into the bookmark or apply special formatting to its content. You can also use bookmarks to retrieve text from a certain location in your document. In Microsoft Word, you can place bookmarks anywhere in the document when needed, or delete them if they are of no use anymore. The bookmarks can be assigned to text fragments, graphic objects, paragraphs, etc. Every bookmark has a unique name consisting of several letters and digits. To insert a bookmark in Microsoft Word: Select the text that you want to enclose in a bookmark, or click where you want to insert a bookmark. On the Insert menu, click **Bookmark**. Under **Bookmark name**, type or select a name. Bookmark names must begin with a letter and may contain numbers. You cannot include spaces in a bookmark name. However, you can use the underscore character to separate words — for example, the "First_heading." Click **Add**. Please note that bookmarks are not visible in Microsoft Word by default. To make them visible, use the following steps: On the **Tools** menu, select **Options...** Select the **View** tab. Under **Show**, check **Bookmarks**. To delete a bookmark in Microsoft Word: On the **Insert** menu, click **Bookmark**. Click the name of the bookmark you want to delete, and then click **Delete**. To delete both the bookmark and the bookmarked item (such as a block of text or other elements), select the item, and then press **DELETE**. The actions that can be performed with bookmarks using Aspose.Words are the same as the ones you can perform using Microsoft Word. You can insert a new bookmark, delete, move to a bookmark, get or set a bookmark name, get or set text enclosed in it. Use **DocumentBuilder.StartBookmark** and **DocumentBuilder.EndBookmark** to create a bookmark by marking its start and end, respectively. Do not forget to pass the same bookmark name to both methods. Bookmarks in a document can overlap and span any range. Badly formed bookmarks or bookmarks with duplicate names will be ignored when the document is saved. The following example adds some text into the document and encloses the text in a bookmark. All white spaces in the bookmarks were replaced with underscores. This restriction came from MS Word formats, since bookmarks in MS Word formats, like DOCX or DOC, cannot have white spaces. However, PDF allows such bookmarks. So now, if you need to use bookmarks in PDF or XPS outlines, you can use them with white spaces. The following code example shows how to create a new bookmark. Sometimes it is necessary to obtain a bookmark collection to iterate through bookmarks or for other purposes. Use the **Node.Range** property exposed by any document node that returns a **Range** object representing the portion of the document contained in this node. Use this object to retrieve a **BookmarkCollection** and then use the collection indexer to get a specific bookmark. The following code example shows how to obtain bookmarks from a bookmark collection. You can download the template file of this example from here. The following code example shows how to get or set a bookmark name and text. You can download the template file of this example from here. The following code example shows how to bookmark a table. If you change the name of a bookmark to a name that already exists in the document, no error will be generated and only the first bookmark will be stored when you save the document. Note that some bookmarks in the document are assigned to form fields. Moving to such a bookmark and inserting text there inserts the text into the form field code. Although this will not invalidate the form field, the inserted text will not be visible because it becomes part of the field code. The following code example demonstrates how to access columns of the bookmarked table. If you need to insert rich content (not just plain text) into a bookmark, you should use **DocumentBuilder.MoveToBookmark** to move the cursor to the bookmark and then use **DocumentBuilder** methods and properties to insert content. **Show/Hide Bookmark Content** The entire **Bookmark** (including the bookmarked content) can be encapsulated within the **True** part of the **IF** field using **Aspose.Words**. It can be in such a way that the **IF** field contains a nested **Merge Field** in the expression (**Left of Operator**) and depending upon the value of **Merge Field**, the **IF** field shows or hides the content of **Bookmark** in **Word** document. The following code example demonstrates how to show/hide bookmarks. A bookmark is a place and location you want to use to easily find time and time again. In the context of the World Wide Web, a bookmark is a "Uniform Resource Identifier" that is stored for later retrieval of any storage formats. We've used bookmarks since we were little for marking a spot in our books, and now we look to create bookmark in Word in order to mark a spot in our business, college, or just any informal document. Bookmarks are a helpful tool for marking specific locations in your document, and today we will learn how to make bookmarks in Word, and how to use bookmarks in Word, as well as in other file formats. **Steps to Create Bookmark in Word** The First Option to Create Bookmark in Word You can easily add as many bookmarks as you like in your document or Outlook message. A bookmark in a word document represents a place you want to find easily again and again. Make sure to give each bookmark a unique name so that you can easily identify them and find them later on. To learn how to create bookmark in Word, you need to follow these steps: 1. Select any text, picture, or any other place in the document where you want to insert a bookmark. 2. Go to "Insert" and then click "Bookmark". 3. A new pop up window will appear, where you need to add a name of your bookmark. Add the name under "Bookmark name", and then click "Add". The name of your bookmark must begin with a letter. Now that you've learned how to create bookmark in Word, and add the bookmark, you can easily jump to it by clicking "Ctrl + G" to open the "Go To" pop up window. Go to the "Find and Replace" box, and click on "Bookmark" in the "Go to what" section. Enter the name of your bookmark. The Second Option to Create Bookmark in Word Another option is to add hyperlinks that will take you to your bookmark. To do that, follow these steps: 1. Select the text, image, or anything else you want to use as hyperlink. 2. Right-click on your mouse, and then select "Hyperlink". 3. In the list "Link to", click on the option "Place in this document", and then select the bookmark you want the link to refer. **Advantages of PDF Format** Word documents are great for written documents. But every now and then, you need a file that independent on the hardware, operating system, and application software. That is where PDF documents come in handy. Unlike Microsoft® Word documents, PDF documents can be opened on any operating system, any hardware, and are basically transferable documents that can be shared across multiple computer platforms. The main benefits of PDF format is that all computer users can open, review, edit, and print the document. Nowadays, we have a plethora of PDF editing software that we can use. And in a similar way you can create bookmark in Word, you can create bookmark in PDF as well. Some might even say it is easier. One of the better PDF software options is Wondershare PDFelement - PDF Editor. Learn more how-to-guide to use PDFelement. Here are some of the main features: Edit PDF text and images. Merge and split different file formats. Use annotation tools to add sticky notes, highlight important text, and add shapes via hand drawing tools. Create PDF document from scratch, or convert any file format into a PDF file. Apply bookmarks and hyperlinks for better organization. **Steps to Create Bookmark in PDF Documents** We talked how to create bookmark in Word, and it was fairly easy. With PDFelement, it is easy as well. Here are the steps: Step 1. Open PDF Open any PDF file in PDFelement by clicking "Open File..." button. Step 2. Create a Bookmark in PDF Go to "View" and then click on "Bookmark". The Bookmark panel will open, and you can go to the page where you want to add a bookmark. Choose a name that will make it easy to find the bookmark later on, and set up other operations for the bookmark in the left panel. Another option is to go the text where you want to add bookmark, select the text or image, and then Right-Click to open the panel. Choose "Add Bookmark" from the list, at which point the Bookmark panel will open. This option works only in Windows. **Free Download or Buy PDFelement right now!
